

Addison Amin Reyes Cedano | Backend Engineer

Location: Santo Domingo Este, Dominican Republic

Phone: +1 849-359-3664

Email: addison.amin@gmail.com

Website: <https://addisonreyes.com>

LinkedIn: <https://www.linkedin.com/in/addison-reyes-9aa017208/>

GitHub: <https://github.com/AddisonReyes>

Backend engineer focused on building reliable backend services, clear domain logic, and robust systems. Experienced with Python, TypeScript and Rust, specializing in API development, authentication, data modeling, backend architecture, tooling, and performance-oriented implementation. I care about writing maintainable software that is practical, scalable, and pleasant to use.

SKILLS

Languages: Python, TypeScript, Rust

Backend: Django, FastAPI, REST APIs, Authentication, OpenAPI/Swagger, Async Programming

Databases: PostgreSQL, MongoDB, SQL, Data Modeling, ORM/ODM Tools

Tools & Infrastructure: Docker, Git, Linux, CI/CD Basics, API Integration, Automation

Software Engineering: Backend Architecture, System Design, Scalable Services, Performance Optimization

EXPERIENCE

SEMS, SRL | Distrito Nacional, Dominican Republic

Software Developer | Full-time, Hybrid | May 2024 - Present

- Designed and implemented backend services and business logic supporting core company operations, handling complex workflows and validation rules.
- Developed and maintained RESTful APIs for system interoperability and integration with internal and external applications.
- Built backend systems using Django to enable data exchange, automation, and service integration.
- Designed scalable data models and optimized ORM-based data access patterns for performance and maintainability.
- Implemented automated reporting systems and internal business intelligence tools, improving data accessibility and operational visibility.
- Collaborated with cross-functional stakeholders to gather requirements and deliver scalable, production-ready software solutions.

SEMS, SRL | Distrito Nacional, Dominican Republic

Data Analyst | Internship, On-site | Feb 2024 - May 2024

- Developed data analysis workflows and visualization dashboards to support business decision-making.
- Automated reporting processes, reducing manual data handling and improving reporting efficiency.

OXSIS, SRL | Santo Domingo Este, Dominican Republic

IT Support Specialist | Part-time, Hybrid | Sep 2020 - Aug 2025

- Provided technical support, system maintenance, and troubleshooting in a logistics and customs environment.
- Assisted in data management, internal systems support, and process automation initiatives.
- Supported operational continuity by resolving technical issues and improving system reliability.

PROJECTS

MiniFT - Personal Finance Tracking Application

Website: <https://minift.net/>

Finance tracker built around a Rust backend, PostgreSQL data modeling, authentication, containerized deployment, and a TypeScript interface for managing transactions, budgets, and financial habits.

Tech: Rust, Rocket, PostgreSQL, TypeScript, Next.js, React, Tailwind CSS, Docker

- Designed and developed a production-ready application centered on Rust backend services, PostgreSQL persistence, authentication, and maintainable domain logic.
- Containerized the application using Docker for consistent deployment environments.

AnimeSR - Anime Recommendation & Discovery Platform

Website: <https://animesr.pages.dev/>

Swagger UI: <https://animesr.up.railway.app/docs> (API Doc)

Code: <https://github.com/AddisonReyes/AnimeSR>

Recommendation-oriented catalog pairing backend filtering and search logic with a TypeScript interface for anime discovery.

Tech: FastAPI, Scikit-Learn, Next.js, React, TypeScript, Docker

- Developed backend search and recommendation services with FastAPI and Scikit-Learn for content-based filtering, plus RESTful APIs for catalog discovery and data retrieval.
- Integrated recommendation logic into backend services and implemented API documentation and endpoints for external consumption.

EasyToDo - Local-First Productivity Application

Website: <https://easy-to-do.pages.dev/>

Code: <https://github.com/AddisonReyes/easy-to-do>

Local-first TypeScript app focused on fast state handling, clean product logic, and a deliberately minimal task and habit workflow.

Tech: TypeScript, Next.js, React, Tailwind CSS

- Implemented local-first data handling and fast state updates for reliable task management in a distraction-free workflow.

EDUCATION

UNICARIBE - Engineer's Degree, Software Engineering

Apr 2025 - Present

ITLA - Associate's Degree, Artificial Intelligence

Aug 2021 - Dec 2023

LANGUAGES

Spanish - Native

English - B2
